Field of application:

The invention relates to an adhesive-seam-strip for all types of floor-coverings adapted to be laid repeatedly.

Objective:

With this adhesive-seam-strip, loose floor-coverings may be joined together in such a manner that no edges arise over which one may stumble and that the floor-coverings may be taken up and again used again separately.

Purpose:

To eliminate accidents with loose floor-coverings and to allow them to be taken up and used again.

Accomplishment of the purpose:

In the case of a commercial Velcro-tape, a textile-tape is either sewn to the felt-part or the Velcro part or is woven thereinto during manufacture. The textile-tape (Fig. 1) is glued under the floor-covering whereas the sewn or woven part of the Velcro part lies free (Fig. 2). The other part of the Velcro-tape (Fig. 3) is glued under the next part of the floor-covering.
